WHAT IS AN ANNOTATED BIBLIOGRAPHY?

An annotated bibliography is a list of citations to books, articles, and other documents. Each citation is followed by a brief (usually about 150 words) descriptive and evaluative paragraph.

The purpose of the annotation is to inform the reader of the relevance, accuracy, and quality of the sources cited.

ANNOTATIONS vs. ABSTRACTS - Abstracts are the purely descriptive summaries often found at the beginning of scholarly journal articles or in periodical indexes. Annotations differ in that they are descriptive and critical; they discuss the author’s point of view, clarity and appropriateness of expression, and authority.

THE PROCESS

Creating an annotated bibliography calls for a variety of intellectual skills: concise exposition, succinct analysis, and informed library research.

- First, locate citations to books, periodicals, and documents that may contain useful information and ideas on your topic.
- Briefly examine and review the actual items. Then choose those works that provide a variety of perspectives on your topic.
- Cite the book, article, or document using the appropriate style. (See below.)
- Write a concise annotation that summarizes the central theme and scope of the book or article. Include one or more sentences that:
  - evaluate the authority or background of the author,
  - comment on the intended audience,
  - compare or contrast this work with another you have cited, or
  - explain how this work illuminates your bibliography topic.

CHOOSING THE CORRECT FORMAT FOR THE CITATIONS - Check with your instructor to find out which style is preferred for your class. Though there are many citation styles, the three most commonly used styles are:

- MLA (Modern Language Association) – Generally used for English, Art, Music, and the Humanities.
- Chicago/Turabian – Generally used for History and the Social Sciences.
SAMPLE ANNOTATED BIBLIOGRAPHY ENTRY FOR A JOURNAL ARTICLE

The following example uses the **APA format** for the journal citation.

The authors, researchers at the Rand Corporation and Brown University, use data from the National Longitudinal Surveys of Young Women and Young Men to test their hypothesis that nonfamily living by young adults alters their attitudes, values, plans, and expectations, moving them away from their belief in traditional sex roles. They find their hypothesis strongly supported in young females, while the effects were fewer in studies of young males. Increasing the time away from parents before marrying increased individualism, self-sufficiency, and changes in attitudes about families. In contrast, an earlier study by Williams cited below shows no significant gender differences in sex role attitudes as a result of nonfamily living.

The following example uses the **MLA format** for the journal citation.

**NOTE:** Standard MLA practice requires double spacing within citations.

The authors, researchers at the Rand Corporation and Brown University, use data from the National Longitudinal Surveys of Young Women and Young Men to test their hypothesis that nonfamily living by young adults alters their attitudes, values, plans, and expectations, moving them away from their belief in traditional sex roles. They find their hypothesis strongly supported in young females, while the effects were fewer in studies of young males. Increasing the time away from parents before marrying increased individualism, self-sufficiency, and changes in attitudes about families. In contrast, an earlier study by Williams cited below shows no significant gender differences in sex role attitudes as a result of nonfamily living.
